OBJECTIVE

Web Developer with education and training in Computer Programming. Seeking to bring a combination of training and experience with troubleshooting/testing customer code and software to a Web Development position in a goal-oriented, fast-paced tech environment.

EDUCATION

Rogers State University

Associate degree in Computer Science. Studied Java, HTML, CSS, and Networking.

Nucamp Online Bootcamp
MERN Full-Stack

Bootstrap
ReactJS
React Native
ExpressJS
MongoDB
NodeJS

KEY SKILLS

JavaScript
HTML
CSS
C#
Java

EXPERIENCE

January 01, 2022 - Present
CSR • TeamSupport
Assist customers via Live Chat software or TeamSupport ticketing software in troubleshooting their software/code (HTML/JavaScript). Escalate tickets to Product team when not able to solve within our toolset.

June 18, 2008 – May 10, 2021
Detail Draftsman • Kelvion Thermal Solutions
Create detail drawings from job folder details as well as Design sketches.
Created automated calculators using Excel (macros/formulas) and Visual Studio C# WinForms to create efficiency in the detail/design processes.

Created calculators where the detailer would just put in a few dimensions and the programs would populate the dimensions for the entire assembly so they would only have to focus on putting in the dimensions and not having to do a bunch of calculations.
My effectiveness at this had my boss doing some in his spare time.

LEADERSHIP

Held Lead Man position at previous job for about 4 years, tasked with assigning employees to specific tasks, creating overtime schedules, ordering inventory, and creating cutsheets for production. I also created complex calculators that would automate material cut lists and inventory usage at the same time.
